

Luxy T2

Design
Dante Donegani,
Giovanni Lauda

Year
2002

Description

Luxy is a "classic" lamp: it was designed as the evolution of technical lamps with pivoted arms. The movement is made possible thanks to a mechanism that uses twisted springs, and which is located in the joints of the forks; it is therefore invisible. The use of a glass diffuser coated with colour paint gives both direct and diffused light, with various warm and elegant hues of colours. Luxy is a decorative lamp, but being available in various models - floor lamp, table lamp, wall and ceiling lamp - it is also practical and versatile: it looks good in any environment, both at home and at work. The interior of the glass is sanded, and finished with two coatings of paint to obtain diffused light, and white for a direct light.

Materials

Pressed glass diffuser; injection moulded nylon forks; arms and the base covering in steel and on/off switch on the diffuser.
