Technical columns

Trim design Dante Bonuccelli

An extensive system of modular kitchen components makes it possible to put together original formal solutions that are also technologically innovative. A complete program, flexible and versatile, comprising differentiated functional elements, with which it is possible to personalise every step of the design process, adapting it to specific necessities. Workspace and appliance blocks, containers, cabinets, shelves and equipment: accessories are re-interpreted to be combined with the utmost freedom, which makes it easier to organise living spaces rationally. The kitchen blends with the living room and the rest of the house, creating new types of configurations.

Hi-Line design Ferruccio Laviani

Shelving system design YabuPushelberg

A proposal that stands out because of its formal lightness, care of details and refined combinations of materials, finishes and colours. The worktable, set apart from the bridge element, and the system of shelves and wall-mounted containers go together perfectly to create a composition that conveys atmosphere and contemporary taste. This proposal interprets the integration of the kitchen workspace with the dining and living areas in an elegant and rational manner.

Tivali design Dante Bonuccelli

Kitchen furniture that develops a new typological concept, able to extensively modify the domestic landscape. A furnishing component that re-interprets the design theme of the bedroom areas with a walk-in wardrobe situated in the operative area of the living room with kitchen. A self-contained block unit opens to reveal an exclusive workspace, defined by fine materials and sophisticated functional equipment.

Technical columns design Dada

Next to these new proposals, Dada presents a few updates to the line of technical columns, which demonstrate the company's commitment to continuously improving its products through a process of constant research.

Trim

Dante Bonuccelli

Trim is an extensive system of modular kitchen components makes it possible to put together innovative solutions in terms of form, technology and typology. A complete program, flexible and versatile, comprising differentiated functional elements, with which it is possible to personalise every step of the design process, adapting it to specific necessities. Workspace and appliance blocks, containers, cabinets, shelves and equipment: accessories are re-interpreted to be combined with the utmost freedom, which makes it easier to organise living spaces rationally and integrate the kitchen with the living area and the rest of the home.

Conceived as actual architectural structures that delimit the contemporary domestic landscape, the numerous models of the Trim kitchen can be set against a wall, in the centre of a room, one in front of the other, in a passage, in the different configurations that develop in a linear manner, along a corner, on both sides, in an island or peninsula set-up.

Flexibility in compositions, formal weightlessness, precision in building details and the non invasive use of technology characterise this project as a refined proposal of industrial design, set apart for its exclusive aesthetic solutions, high technical performance and comfortable living features.

Components

Operative counter with worktop available in several materials (stainless steel, natural stone, layered back-painted glass, etc.), equipped with integrated sink and hob (welded flush with countertop or built-in).

Equipped base with electrified drawer units, containers with internal drawers, incorporated appliances (oven, dishwasher, refrigerator drawers); door with receding linear handles in polished or painted anodised aluminium; receding baseboard in polished anodised aluminium.

Totally extractable drawers with steel sides and disappearing runners equipped with an automated, pressure-activated opening and closing system; equipped with various functional accessories: extractable separate collection unit for garbage and recyclables, cutting board, trays designed for flatware, knives, salt shakers and spice rack, etc.

Accessorised wall with containers flush with the countertop, wall cabinets with roller shutters. Closed container flush with the countertop, with doors in extra-clear etched glass (or lacquered panels), with an vertical sliding opening mechanism that disappears when lowered; the interior is accessorised with service lights, electrified technological bar, etched glass shelves, container accessories.

Large wall-mounted cabinet, closed with an electrical disappearing roller in grey oak or wengè, available in two depths; interior accessorised with etched glass shelves, automatic service lights; designed to be integrated with the suction system. Wall-mounted cabinet with flush sliding doors accessorised internally like the preceding model.

Reduced thickness L-shaped shelves mounted on the wall.

Suction system with wall-mounted and ceiling mounted exhaust hoods covered with corrugated stainless steel panels or coordinated with the door finish; a model that is integrated with the cabinets is also available.

Table with top in natural wood (walnut, wengè) and legs in polished extruded anodised aluminium.

Types

Linear composition with countertop and accessorised wall with containers flush with the countertop, L-shaped shelves and wall cabinet with roller shutters.

Finishing: pure black quartzite top; doors, cabinet and shelves in glossy white lacquer; roller shutter in grey oak; flush containers with door in extra-clear etched glass.

Composition with double sided island: kitchen side with countertop workspace and countertop containers; living room side with

dining table set next to the accessorised wall with low containers and receding modules.

Finishing: top and sides in pure black quartzite; kitchen side doors in glossy white lacquer (base) and mat white (countertop container); living room doors in walnut (base) and mat white lacquer with top and sides in aluminium (accessory container); table with walnut top and polished anodised aluminium legs.

Linear composition comprising a countertop workspace, with integrated sink and hob and a double oven unit, roller shutter cabinet, exhaust hood with front piece and L-shaped shelves. Finishing: top in layered glass painted yellow; doors in white Duropal laminate; shelves and hook in mat white lacquer; shutter in wengè; back panel in yellow sanded glass.

Corner composition comprising three elements: sink unit with flush top containers and L-shaped shelves; hob unit with burners and suction hood with filler panel in the same finish as the doors; pantry unit with incorporated appliances. Finishing: top in cashmere white silk granite; base doors in light grey climb laminate; column doors, shelves and hood in glossy toner lacquer; back base with doors in etched extra-clear glass.

02

Hi-Line

Ferruccio Laviani

Conceived as a vital centre of the living space, the kitchen defines an area in the home that is completely open onto the living room. A functional room that stands out because of its formal lightness, care of details and refined combinations of materials and colours. The countertop, with its distinguishing bridge element, and the wall-mounted shelving and container systems combine perfectly to define a composition with character and contemporary taste.

Made through a construction system that uses several combinations of very few modular elements, this kitchen can be arranged in many different compositions. Innovative wall, island, peninsula and corner configurations interpret different needs and methods of use.

Simple lines, essential shapes, suspended volumes and contained thicknesses are features of this architectural unit, which has great personality and strongly characterises the domestic environment in which it is placed. The kitchen delimits a space within a space, maintaining constant dialogue with the rest of the home. At the same time, the wall compositions with shelves and sliding panels provide personalised modular solutions for specific design needs. Inserted harmoniously in the open space of the living room, the kitchen is conceived as an integral part of one single room.

Components

Counter made entirely of steel with a no-fingerprint surface treatment.

Accessorised operative area with sink and hob welded flush with the top in stainless steel.

Base with doors with hidden handles, containers with internal drawers, incorporated appliances (oven, dishwasher, refrigerator drawers); totally extractable drawers with anodised aluminium sides and disappearing runners that can be equipped with various functional accessories. extractable separate collection unit for garbage and recyclables, cutting board, trays designed for flatware, knives, salt shakers and spice rack, etc.

Work table set in a bridge configuration with a supporting structure in steel and glass top back-painted black.

03

Shelving system

YabuPushelberg

The shelving system is a wall unit that has been planned and constructed as an independent and practical component. This new concept goes well with the different Dada models and was thought

out to blend the operative kitchen space with the open atmosphere of the living room. Characterized by a formal, unimposing aspect and a compositional flexibility, this modular system is composed of a structural backboard, shelves, dividing panels, and sliding doors. The shelves have been arranged in order to incorporate service lights along the surface, a ceiling suction hood, and a technological electric bar equipped to magnetically hold utensils and accessory holders.

Components

Shelves in aluminium extrusions, covered in black oak and equipped with built-in sliding tracks, have been attached to the structural steel backboard. Furthermore, there are dividing panels and silver sliding doors treated with an anti-fingerprint finish.

The top shelf has been calculated to incorporate the ceiling suction hood which guarantees an efficient ventilation in the cooking area as well as the service lights along the worktop and the technological bar which is equipped with an electric outlet, a suspended element, and glass support shelves.

04

Tivali

Dante Bonuccelli

This new concept mono-block kitchen unit is capable of profoundly changing the household environment. It is a closable operative kitchen unit that may be positioned either against the wall or in the middle of the room.

The workspace may be contained in a sort of walk-in closet that is characterized by an innovative opening system that allows you to glide-away the doors until they disappear. It is equipped with all of the necessary supplies for washing, preparing, and cooking food, and it is a practical component, strongly innovative on a technological, aesthetic, and compositional level. It has been planned with original, constructive solutions and calculated to guarantee an appropriate technical performance. Its volume is essential and attention has been devoted to every small detail. Simple shapes, smooth surfaces, clear lines, select material, and fine finishings define a high-quality kitchen thought up to occupy a modern environment. It is a component of industrial design that reinterprets the planning theme of the bedroom with a walk-in closet, applying it to the work space of the kitchen incorporated in the living room. The compositional element is a strong architectural and technological connotation that characterizes the domestic environment in which it has been integrated.

Components

This mono-block kitchen is characterized by an innovative opening system patented with foldable double doors that glide-away until they are no longer visible to leave the work space completely free and accessible.

The outer finishing on the four sides is a bright lacquered orange. The interior equipment and the work area are made in stainless-steel.

The vertical coverings are in white-lacquered glass.

The worktop consists of a sink, built-in stove, and a double front lined with drawers equipped with a cutlery tray, a knife-holder, and compartments.

The kitchen also comes with a base equipped with a chest of drawers, containers with internal drawers, a basket with an ecological kit for the separate collection of household waste, and incorporated household appliances (oven, dishwasher, refrigerator drawers).

In the upper part of the kitchen, there is an open aluminium shelf, a sliding panel with a partial screen (half-open/ half-closed), an incorporated ceiling suction hood, service lights along the worktop, and electric outlets for small household appliances.

The upper panel is equipped with spotlights that may be turned on by thermic sensors and automatically turn off when there is no presence detected.

05

Continuous evolution

Dada has developed an intense activity of research and experimentation, targeted with a constant improvement of product quality. Innovative solutions on a formal, technological, and typological level have always accompanied the activity of the company, as seen in the numerous registered patents that it holds. Next to the different models in its series, a line of accessories and practical, yet independent components complete the compositional proposal. These accessories are modular elements at a high technical and performance content, capable of communicating with different systems and products of industrial design thought up to satisfy specific project demands. The most innovative proposals, even though they have been produced for several years and are therefore, tested by the market, are constantly subjected to an evolutionary process of revision and improvement.

Operative Column

The column-shaped containing unit redefines the type of cupboard in practical terms, through a more dynamic and refined interpretation. It is a furnishing component characterized by an innovative opening system with foldable sliding doors that glide-away until they disappear and it provides the internal work space with the most ample accessibility. It may be used singularly or integrated in a composition and allows one to customize the kitchen environment according to the specific product demands.

Available in different combinations, the operative column is equipped with crystal shelves, an extractable worktop in either stainless-steel, natural wood, or porcelain stoneware, accessory holding containers in transparent methacrylate, an aluminium cupboard with chest of drawers and a front that matches either the worktop or the outer covering, service lights, electric outlets for small household appliances, and spotlights that work upon thermic sensors.

Due to further improvement in the structural components as well as in the sliding mechanisms, the system is able to assure higher performance levels with regard to dependability, comfort, and easiness of use. The planning of the constructive details, the selection of materials, the choice of finishings, and the study of chromatic approaches are all very precise.

Corner column

This rotating column is a great solution for furnishing a corner and it is distinguished for its notable holding capacity and two rotating doors (customized with the same finishing in which it is integrated) inside the furnishing that allows for the full use of the shelves. It is equipped with new concept baskets in chromatic steel illuminated by the service lights.

The rotating system has been calculated for application to every type of kitchen and is characterized by high-quality material and rotating mechanisms capable of assuring high performance technique and easy use.

Extractable column

This column-shaped holding unit is equipped with chromium steel cupboard baskets and a special removable opening system which slides along the track until it disappears. It has been planned for perfectly integrating with all the Dada kitchens in a wide range of finishings and colors.

Household appliance column

A practical column arranged for incorporating visible built-in household appliances (ovens, hotplate drawers, and wine crates) as well as those which may be hidden (refrigerators, refrigerator drawers, dishwashers, etc.) with doors in the same finishing as the composition in which it is integrated.
